

A

CMS by site, high-confidence calls (minPosterior ≥ 0.5)

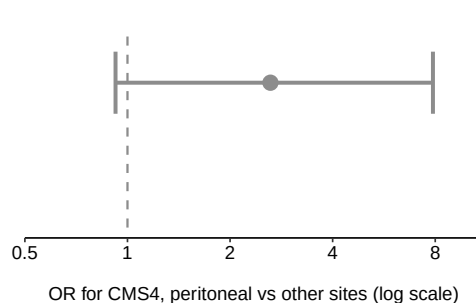

B

CMS4 enrichment, strict subset (descriptive)

OR = 2.63 (95% CI 0.92–7.88)

Fisher exact P = 0.060

CMS4: PM 22/41 (54%) vs non-PM 10/33 (30%)

High-confidence CMSclassifier random-forest calls (maximum posterior probability ≥ 0.5), n = 74 of 113 GSE190609 samples.

PT = primary tumor; PM = peritoneal metastasis; LM = liver metastasis; Other met = lymph-node (n = 4) and ovarian (n = 1) metastases.

Sample-level Fisher's exact test ignores within-patient correlation and is descriptive only; the primary patient-aware GLMM estimate is reported in the main text.
